SOUTHWEST REGION

The Southwest Region covers nine counties in the southwestern part of the state: Allegan, Barry, Berrien, Branch, Calhoun, Cass, Kalamazoo, St. Joseph, and Van Buren counties. Major state highways include I-69, I-94, I-196, US-12, US-31, and US-131.

The Southwest Region is the state's fruit basket thanks to the moderating climate effect of Lake Michigan. The region is traversed by I-94, an important international trade corridor linking Port Huron and Detroit to Chicago and Toronto. This makes the Southwest Region an ideal location for many industries, particularly those supporting the automobile manufacturing industry. To bolster industries and commerce important to the region and the state, project selection emphasizes freeway improvements and modernization.

The Southwest Region also boasts a significant tourist trade. To welcome visitors to Michigan, MDOT's Southwest Region has improved most highway entrances into Michigan, with an additional entrance improvement on US-31 scheduled for 2006.

Past Accomplishments

The Southwest Region continues to work towards meeting MDOT's statewide pavement and bridge condition goals. Achievements of the Southwest Region's past five years include:

Reconstruction of two miles of M-63 from I-94 to Hickory Creek, including the addition of a center turn lane, drainage and bridge improvements. This project will greatly enhance the operation of M-63 near St. Joseph, Berrien County.

Completion and opening of the ten mile segment of US-31 freeway between Berrien Springs and Napier Road in Berrien County.

Replace I-94 bridges over the CSX Railroad near Sawyer, including the extension of the ramp across the westbound bridge, Berrien County.

Reconstruction of M-89 at the CSX Railroad in Fennville, Allegan County.

Rehabilitation of over five miles of M-43/M-89 from west of Richland to 42nd Street, Kalamazoo County.

Rehabilitation of seven and a half miles of US-131 from Wayland to the Kent County line, Allegan County.

Reconstruction of ten miles of I-69 from north of Girard Road to north of J Drive South, Branch and Calhoun Counties.

These are but a few of the \$76 million in construction contracts awarded by the Southwest Region in 2003.

Twenty-seven miles of road were improved under the "rehabilitate and reconstruct" program with another 186 miles improved under the capital preventative maintenance program, translating to 18% of all Southwest Region route miles receiving some type of rehabilitation or repair. Nine bridges were improved under the rehabilitate and reconstruct bridge program, and twenty-four bridges received maintenance work which represents 7% of the bridge system for the Southwest Region.

Projects that were awarded in 2003 and will be completed in 2004 include:

Reconstruct more than a half mile of US-12 from Elaine Street to Centreville Road, including minor widening and drainage improvements in Sturgis, St. Joseph County.

Reconstruct and Resurface more than a mile of US-12 from west village limits of Three Oaks to Tulip Street, Berrien County.

Reconstruct more than a mile of M-51 from Mills Street to Park Drive, including minor widening and drainage improvements in Decatur, Van Buren County.

All other Southwest Region projects scheduled for 2003 were completed.

Five Year Road and Bridge Program

The projects identified in this 2004 to 2008 Five Year Road and Bridge Program for the Southwest Region total approximately \$264 million. Investments are allocated in the following manner:

Preserve First \$ 35 Million
Road & Bridge Preservation \$209 Million
Capacity Improvements & New Roads
Design & Pre-Construction Activities \$ 20 Million

The Program has been developed within the framework of the Department's goals and investment strategies and in coordination with local agencies. This integrated program consists of Rehabilitate and Reconstruct, New Roads and Improve Capacity, Preserve First, Capital Preventive Maintenance, and Non-Freeway Resurfacing Programs.

The 2004-2008 programs for rehabilitation and reconstruction and capacity improvement work will upgrade more than 145 miles (12%) of the regions 1,232 miles of roadways and improve twenty-five (5%) of the regions 496 bridges. In addition, capital preventative maintenance projects, programmed annually, are planned for a significant number of pavements and bridges. This treatment will improve the pavement/bridge condition and extend the roadways' life.

Corridor Improvement Strategies

As outlined in the State Long Range Plan 2000-2025, the Southwest Region continues to invest in the corridors of highest significance (I-94, I-69, US-131, and US-31/I-196). These corridors represent the backbone of Michigan's economy and the Southwest Region will continue to focus investments to rebuild and modernize these roadways and the transportation facilities within them.

The Southwest Region continues to use an asset management approach to analyze all of our roadway corridors. This approach groups projects from our program categories; such as, rehabilitate and reconstruct, capitol preventative maintenance, scheduled maintenance, and safety, as well as grouping state projects with local projects. Pavement management strategies including remaining service life and roadway condition models are utilized to develop the type of fixes and costs necessary to preserve our roads and bridges.

The US-131BR/Industrial Corridor in Kalamazoo received designated funds through TEA-21 legislation. An economic impact study was conducted by the Kalamazoo Area Transportation Study, Kalamazoo's metropolitan planning organization. Though the study did not demonstrate that improvements to the US-131/US-131BR interchange would be economically beneficial to the area, the study team is continuing to study additional possibilities.

The I-69 corridor continues to be improved from the Indiana state line to the southern Eaton County line. To complete the corridor improvements, projects are scheduled in 2004 and 2006.

Capacity Improvements and New Roads

US-31 / Napier Avenue to I-94, Berrien County

The last segment of this new limited access freeway is in the final stages of the environmental clearance process. A preferred alternative was identified in the Environmental Impact Statement (EIS). A Final EIS and a Record of Decision is expected in 2004. MDOT will proceed with design and right-of-way acquisition phases after a Record of Decision is received from the Federal Highway Administration.

Design and right of way phases will begin in 2004 with design finishing in 2005 and right of way continuing through 2007. The construction phase is deferred pending reasonable assurance of achieving and sustaining system condition goals and the identification of additional funding. Napier Avenue, the temporary connection between US-31 and I-94, has been widened to meet projected traffic demand.

I-94 / US-131 to Sprinkle Road, Kalamazoo County

This segment of I-94 between US-131 and Sprinkle Road in the Cities of Kalamazoo and Portage was identified in the 2000 Kalamazoo Area Freeway Needs Study as the section in most need of widening.

An Environmental Assessment, following a Finding of No Significant Impact (FONSI), was approved in February of 2003. Design work is underway and will be completed in 2004. Funds for right of way and construction have not been identified.

US-131 / North of Indiana Toll Road to one mile north of Cowling Road, St. Joseph County

MDOT is preparing an EIS to evaluate improvement alternatives on US-131 from the State Line to Edgerton Road north of Three Rivers (16.0 miles). An access management plan is also being prepared for the entire corridor as part of the EPE effort. A DEIS and public hearing is expected in 2004. A FEIS and a Record of Decision could be completed in 2005. Upon completion of the EPE study, the department will review funding opportunities for subsequent project phases along the corridor.

I-94 Business Loop, Battle Creek, Calhoun County

An agreement has been reached between MDOT and the City of Battle Creek regarding a modified project along I-94BL. The proposed improvements include the widening of Dickman Road (relocated I-94 Business Loop) to 5 lanes, from I-194 to Main Street and to 3 lanes between Main Street and Elm Street. The intersection of Elm Street (relocated I-94BL) and Michigan Avenue would receive minor geometric improvements as part of this plan. The design, right-of-way acquisition, and construction have been deferred pending reasonable assurance of achieving and sustaining system condition goals and the identification of additional funding.
